Technical Skills

- Flask
- NestJS
- HTML, CSS
- TypeScript
- React
- Git & GitHub
- MySQL
- PostgreSQL
- Figma
- Adobe Photoshop
- Canva

IT & Support

- Technical Support
- LAN Networking
- Hardware & Software Troubleshooting

Soft Skills

- Problem Solving
- Communication
- Teamwork

LANGUAGES

- English
- Kiswahili

PROFILE

I am a well-rounded IT specialist with practical experience in ICT support, UX design and full-stack web development. I have experience setting up systems, troubleshooting and providing user support as well as building web applications using React, NestJS, Flask and MySQL. I enjoy solving real-world problems and working in both technical support and software-focused environments.

WORK EXPERIENCE

TECHNICAL TRAINEE | NGENX MAY 2024 -AUGUST 2024

- Helped with system setup, maintenance and troubleshooting of hardware, software and network issues
- Provided technical support to employees such as fixing connection problems and setting up user computers
- Installed and updated software to keep systems running smoothly
- Assisted with LAN maintenance and basic network configuration
- Helped install and maintain printers and other peripheral devices
- Helped document and report technical issues when needed

TECHNICAL TRAINEE | Teach2give MAY 2025 -JULY 2025

- Developed full-stack web applications using NestJS for backend services and React with TanStack for the frontend
- Built dynamic and efficient data tables using React Table
- Created responsive and user-friendly interfaces using Tailwind CSS
- Developed RESTful APIs to manage application logic and data flow
- Integrated frontend components with backend services to deliver functional applications
- Applied UI/UX principles to create clear and easy-to-use user interfaces
- Collaborated with other developers during development and debugging
- Gained hands-on experience with modern web application architecture and team-based development

Software Development, UI/UX & Technical Skills Development

- Developed backend web applications using Flask handling application logic, authentication and database interactions
- Gained experience in UI/UX design by creating posters and visual content using Adobe Photoshop and Canva
- Designed interface prototypes in Figma focusing on usability and consistent layouts
- Learned basic data analysis concepts with a focus on simple analysis methods and data visualization
- Improved the ability to combine software development, design and analytical thinking to build well-structured digital solutions

PROJECTS

Leave Management System

Flask, MySQL, HTML, CSS, JavaScript - https://github.com/mosii721/Leave-managment

I developed a web-based leave management system that handles employee leave applications and administrative approvals. The system implements role-based access control, allowing employees to apply for leave while administrators review and process requests. I built the backend application logic using Flask, designed relational database models in MySQL and implemented full CRUD operations for leave records. The frontend was developed using HTML, CSS and JavaScript to provide a functional and user-friendly interface.

Ride-Sharing System - https://ride-sharing-frontend-rho.vercel.app/

NestJS, PostgreSQL, React - https://github.com/mosii721/Ride-Sharing-Frontend, https://github.com/mosii721/Ride-Sharing-Backend

I designed and developed a full-stack ride-sharing application using NestJS for the backend and React with TanStack for the frontend. I implemented secure login and access control using JWT and PassportJS with support for role-based permissions. The backend used TypeORM with PostgreSQL for data storage. I built backend endpoints to handle application logic and integrated them with the frontend. The user interface was built using Tailwind CSS with React Table used to display table data and handle features like pagination and sorting. This project improved my understanding of application design, security and full-stack integration.

Property Management System

NestJS, PostgreSQL, React - https://github.com/mosii721/Property-Management-System, https://github.com/mosii721/Property-Management-System-Frontend

I developed a full-stack property management application that supports three user roles: Admin, Landlord and Tenant, each with role-specific access and features. I implemented secure login and access control using JWT and PassportJS to enforce role-based permissions across the application. The backend was built using NestJS with TypeORM and PostgreSQL to manage property records, users and related data. The frontend was developed using React with TanStack with React Table used to display data and Tailwind CSS used to build responsive user interfaces. This project improved my understanding of role-based system design, data modeling and multi-user application workflows.

CERTIFICATIONS

Certificate of Completion - Industrial Attachment NGENX SOLUTIONS LIMITED 2024

Certificate of Completion - Full Stack Web Development TEACH2GIVE 2025
