SKILLS

- Flask
- HTML, CSS
- JavaScript
- Git & GitHub
- TypeScript
- React
- SQL
- Technical Support
- Networking
- Figma
- Photoshop
- Problem Solving
- Communication
- Teamwork

LANGUAGES

- English
- Kiswahili

PROFILE

I am a motivated and flexible IT professional with hands-on experience in ICT support, UI/UX design and full stack web development. I have handled routine IT operations including system setup, troubleshooting and user support while also designing and developing web applications using modern technologies such as react, NestJS, Flask and MySQL. I am adaptable, detail oriented and passionate about using technology to solve practical problems in both technical support and software driven environments.

WORK EXPERIENCE

TECHNICAL TRAINEE | NGENX

MAY 2024 -AUGUST 2024

During my industrial attachment at NGENX, I supported the companies ICT operations by assisting with system setup, maintenance and troubleshooting of hardware, software and network related issues. I provided technical support to staff by resolving connectivity issues, configuring user systems and installing required software and updates. I also assisted in maintaining the local area network connectivity, configuring basic network settings and ensuring smooth operations of peripheral devices such as printers. This role strengthened my practical understanding of IT infrastructure, user support and daily ICT operations in a professional setting.

TECHNICAL TRAINEE | Teach2give

MAY 2025 -JULY 2025

At teach2give, I gained hands-on experience in fullstack web development by designing and developing web applications using NestJS for backend services and react with TanStack startfor the frontend. I worked with React Table to implement dynamic and efficient data tables and used tailwind CSS to design responsive and user-friendly interfaces.I worked on building RESTFUL APIs to handle application logic and data flow and intergrated frontend components with backend services to deliver functional and responsive applictaions. I also applied UI/UX principles to create intuitive user interfaces, collaborated with team members during development and debugging and improved my understanding of modern web application architecture. This attachment strengthened my skills in software development, problem-solving and collaborative development workflows

Software Development, UI/UX & Technical Skills Development

I developed practical skills in backend web development using Flask, where I designed and implemented application logic, authentication features and database interactions. I also gained experience in UI/UX design by creating posters and visual materials using Adobe photoshop and Canva and designing interface prototypes using Figma with a focus on usability and layout consistency. In addition, I am actively learning data anlysis concepts and tools , including basic analysis techniques and visualization as part of my ongoing technical skills development. This experience has strehgthened my ability to combine software development, design and anlytical thinking to deliver well structured digital solutons.

PROJECTS

Leave Management System

Flask, MySQL, HTML, CSS, JavaScript

I developed a web-based leave management system to manage employee leave applications and administrative approvals. The system supports role-based access for employees and administrators allowing users to apply for leave while administrators review and manage requests. I implemented backend application logic using Flask, designed relational database models using MySQL and built CRUD functionality for leave records. The frontend was developed using HTML, CSS and JavaScript to provide a functional and user-friendly interface.

Ride-Sharing Application - https://ride-sharing-frontend-rho.vercel.app/

NestJS, PostgreSQL, React

I designed and developed a full stack ride-sharing application using NestJS for backend services and React with TanStack Start for the frontend. I implemented secure authentication and authorization using JWT and passport.js including role-based access control. The backend was built using TypeORM with PostgreSQL for data persistence and structured data management. I developed RESTful APIs to handle application logic and integrated frontend components with backend services. The user interface was built with tailwind CSS with Recat Table used to manage and display dynamic data sets. This project strengthened my understanding of scalable application architecture, API security and full stack integration.

Property Management Application

NestJS, PostgreSQL, React

I developed a full stack property management application supporting three different user roles: Admin, landlord and tenant each with role specific access and functionality. I implemented secure authentication and authorization using JWT and Passport.js enforcing role-based access control across the application. The backend was built using NestJs with TypeORM and PostgreSQL to manage property records, users and related data. The frontend was developed using react with TanStack start with React table used to manage and display structured data and Tailwind CSS used to build responsive user interfaces. This project strengthened my understanding of role-based systems design, data modelling and multi-user application workflows.
